

INDIGO - DataCloud

Software Quality Assurance (SQA) Report

11 - 15 July 2016

Ophidia analytics workflow interfaces

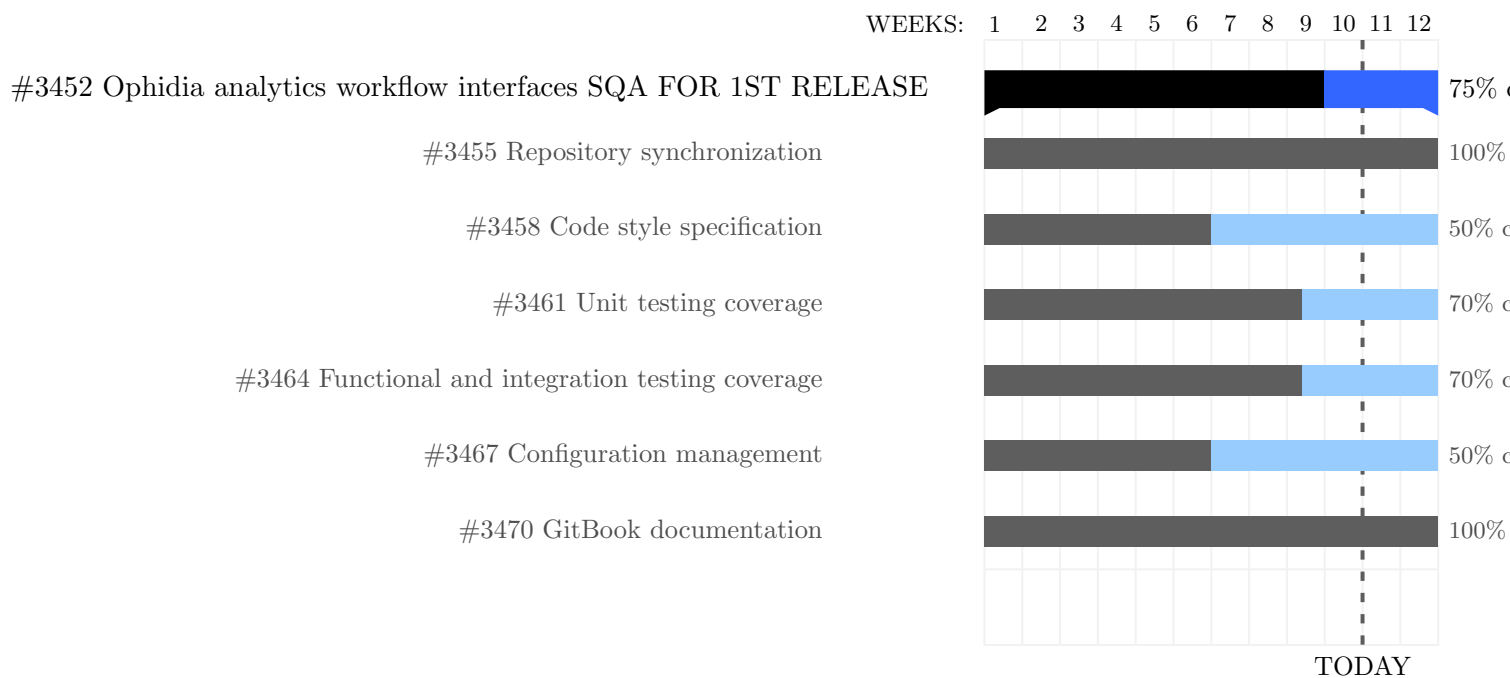

SQA Progress Status **NOT COMPLETE**

75% done

GitHub repository	COMPLETE
Code style adherence	IN PROGRESS - WP3
Code coverage	70%
Functional/integration testing	NOT COMPLETE
GitBook documentation	COMPLETE
Automated deployment	COMPLETE

Part I

Task Progress for the 1st Release

1 Repository synchronization

Products contributing to INDIGO-DataCloud project must have their code available under GitHub's `indigo-dc` organization.

Repository exists under `indigo-dc` GitHub organization:

- <https://github.com/indigo-dc/ophidia-analytics-framework>
- <https://github.com/indigo-dc/ophidia-primitives>
- <https://github.com/indigo-dc/ophidia-server>
- <https://github.com/indigo-dc/ophidia-terminal>

2 Code Style

Products contributing to INDIGO-DataCloud project are expected to be adhered to a community or de-facto standard code style definition. Exceptions can be made to the selected standard. Custom style guides are

accepted but nonetheless not recommended.

Code style definition	K&R indent style		
Community/de-facto standard	Yes		
Exceptions	0		
Richness	None	Errors None	Warnings None link

2.1 Observations

- Product team uses K&R indent style. Currently searching for an appropriate tool to check this standard.

3 Unit Testing

Code coverage will be tracked for the INDIGO-DataCloud related products and must not decrease during the project's duration. Recommended threshold is 70%.

3.1 Observations

- Product team will make scripts available (from their local CI service) and job was defined, successfully run

4 Functional/Integration testing

Functional testing must cover at least the basic functionalities that the product was requested to fulfill within the INDIGO-DataCloud project scope. Integration testing must cover the interactions with other components. Both types of testing will be automated whenever feasible by integrating them in the project's continuous integration service.

No functional or integration testing provided.

4.1 Observations

- Product team made the scripts available (from their local CI service) and job was defined, successfully run.

5 GitBook documentation

*Product-related documentation must be uploaded to GitBook's **indigo-dc** central repository. Types of documentation includes a) Developer b) Deployment and Administration c) Command-line Interface (CLI) and Application Program Interface (API) d) User Documentation. All these types may not be applied for every product. Those products that offer functionalities out of the scope of INDIGO-DataCloud project needs may not provide all the spectrum, but links to the official documentation.*

5.1 Types of documentation currently provided6 CONFIGURATION MANAGEMENT

Documentation available under `indigo-dc` GitBook organization:

<https://sandrofiore.gitbooks.io/ophidiabigdata/content/>

5.1 Types of documentation currently provided

Readme	User documentation	Developer documentation	Administration documentation
--------	--------------------	-------------------------	------------------------------

5.2 Observations

- GitBook updated. The team will keep the gitbook page of Ophidia updated throughout the entire project lifetime.

6 Configuration Management

Those products released by INDIGO-DataCloud project that need to be deployed by the end user must rely on a maintained open-source configuration management tool to provide an automated means to install and configure the product. The recommended tool is Ansible.

Tool	ansible
Deployment coverage	installation
Manifest link	https://github.com/indigo-dc/ansible-role-ophidia-terminal

6.1 Build status

Ubuntu 14.04 LTS	failed
CentOS7	failed

Part II

How to read this document

1 Summary (front) page

Both the overall product's SQA adherence and per-task status codes are explained below:

COMPLETE

Task has been successfully completed and fulfills the project's SQA requirements, listed in [Deliverable D3.1](#) and [Extensions to Software Quality Assurance](#) documents.

NOT COMPLETE

Task has not been completed, yet some missing required bits have not been provided.

IN PROGRESS

Task has not been completed, but can proceed as it is.

WP3 PENDING

Task has some pending work from WP3 side, meaning that the product team already submitted the required data but it has not been yet consumed by WP3.

2 Task Progress

2.1 Code style

Code style definition

Name and link of the standard to which the product is adhered.

Community/de-facto standard

Whether the adopted standard is community-wide accepted.

Exceptions

Number of exceptions from the standard definition.

Number of rules defined in the adopted standard.

Richness

Additionally (whenever available) the **number of errors**, **number of warnings** documented in the standard will be displayed as well as the **link** to the latest definition.

2.2 Unit testing

This section will display the a) **trend graph** with the evolution of the code coverage over time and b) the **Cobertura report**, with the coverage results of different methods. Both are taken from the project's Jenkins continuous integration service.

Note: resultant coverage value is the lowest of the ones for the different methods: packages, files, classes, lines, conditionals.

2.3 Functional/Integration testing

2.4 GitBook documentation

Whenever the documentation of the product is available at the project's GitBook repository, both the a) **link** to the documentation index and b) **type of documentation** provided will be displayed in the report.

2.5 Configuration Management

Whenever the product has an recipe to be deployed automatically the following information will be available:

Tool	Configuration management tool used.
Manifest link	URL pointing to the manifest/s.
Deployment level	Whether installation , configuration or both.
Build status	Current build status for the project's supported OS distributions.
